Blood Donation App Project

Stakeholders Interview

Government Authorities / Blood Banks Interview

- What are the legal requirements for launching an electronic application linking donors and hospitals?
- What cybersecurity standards are required?
- Should the application be integrated with a national blood database?
- What is the minimum data required to verify donor identity?
- Can the application provide an API for government hospitals?

Management Team Interview

- What are the project goals within 3 months / 6 months / 1 year?
- What is the initial budget and is there a clear financial plan?
- Is the goal purely humanitarian, or is there a future revenue model?
- How will partnerships with hospitals be managed?
- What are the priority features in the first version (MVP)?

Hospitals Interview

- What are the biggest challenges you face in reaching blood donors quickly?
- What data do you need to verify donor eligibility?
- How do you currently handle emergency blood shortages?
- Do you use an instant notification system for nearby donors?
- How can the app integrate with your internal system?
- What standards must be met for the app to be officially approved?
- Are there specific blood types that are constantly in shortage?
